Art Unit: 3733

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-3,8-19,22-25,30-38 are rejected under 35 U.S.C. 102(e) as being anticipated by Huppert et al. (WO 03/039400).

With respect to claims 1, 22,23, Huppert et al disclose a prosthetic device for anterior-oblique insertion into an intervertebral space, comprising a first component (112) comprising a first articular surface and opposed first bearing surface, a first flange (2') extending from the bearing surface, the first flange being angled relative to the to the longitudinal and transverse axes of the first components; as best seen in FIG.4, a projection (13) extending from the first articular surface; and a second component (111) comprising a second articular surface and an opposed second bearing surface; a

Art Unit: 3733

second flange (2) extending from the second bearing surface the second flange being angled relative to the longitudinal and transverse axes of the second component; as best seen in FIG.4, as set forth in page 2, lines 2, 6, 16-24, page 6, lines 9-13, page 7, lines 11-19, 29-31 a recess, as best seen in FIG.3, formed in the second articular surface, the recess being adapted to engage with the projection to provide for articulating motion between the first and second components.

With respect to claims 2-3, 8-19, 24-25, Huppert et al disclose all the limitations; as set forth; for example, the flanges are adapted to aligned either parallel or offset relative to each other, as best seen in FIG.4, the flange including a gap and sharp portion; the projection being convex and the recess being concave as best seen in FIG.3, the flange adapted to be positioned within a preformed anterior-oblique opening, as best seen in FIG.4, the flange coated with a bone promoting substance; as set forth in page 8, line 16.

With respect to claims 30-38, the method steps, as set forth, would have been inherently carried out in the operation of the device, asset forth above.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/774,157

Claims 4-7,26-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Huppert et al. (WO 03/039400).

With respect to the above claims, it is noted that Huppert et al did not teach of a device having a triangular shape and a flange parallel to either one of the sides; as claimed by applicant. However, this particular shape is nothing more than one of numerous configurations one of ordinary skill in the art would have found obvious for the purpose of providing mating surface in the prosthetic device of Huppert et al. in re Dailey, 149 USPQ 47 (CCPA 1976). As for the flange being parallel to any one of the sides, as can be seen in FIG.4 of Huppert et al the flange would have parallel to any one of the sides.

Claims 20,22, are rejected under 35 U.S.C. 103(a) as being unpatentable over Huppert et al. (WO 03/039400) in view of Marnay et al. (6,936,071).

With respect to claims 21,22, it is noted that Huppert et al did not teach of a first and second components including a pair of notches; as claimed by applicant. However, in a similar art, Marnay et al evidence the use of a first and second components including a pair of notches to introduce an implant into an intervertebral space.

Therefore, given the teaching of Manay et al, it would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the a pair of notches in the device of Huppert et al, to introduce the device of Huppert et al into an intervertebral space.

Conclusion

Application/Control Number: 10/774,157

Art Unit: 3733

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
